

Free Video Converter

Preferences

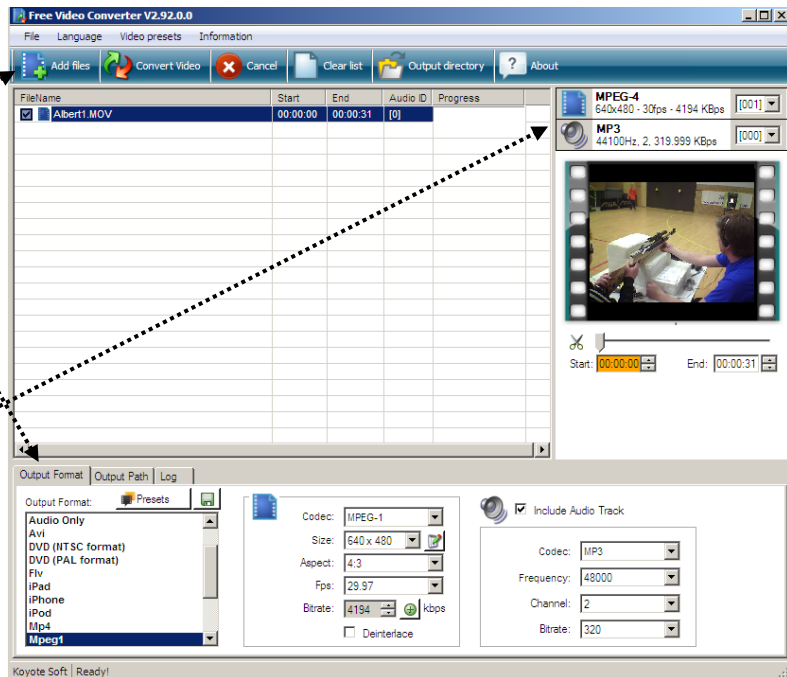

Start with adding a file

Add files

Output format

Mpeg1 works in the most programs

For best result choose same video and sound properties as in the original

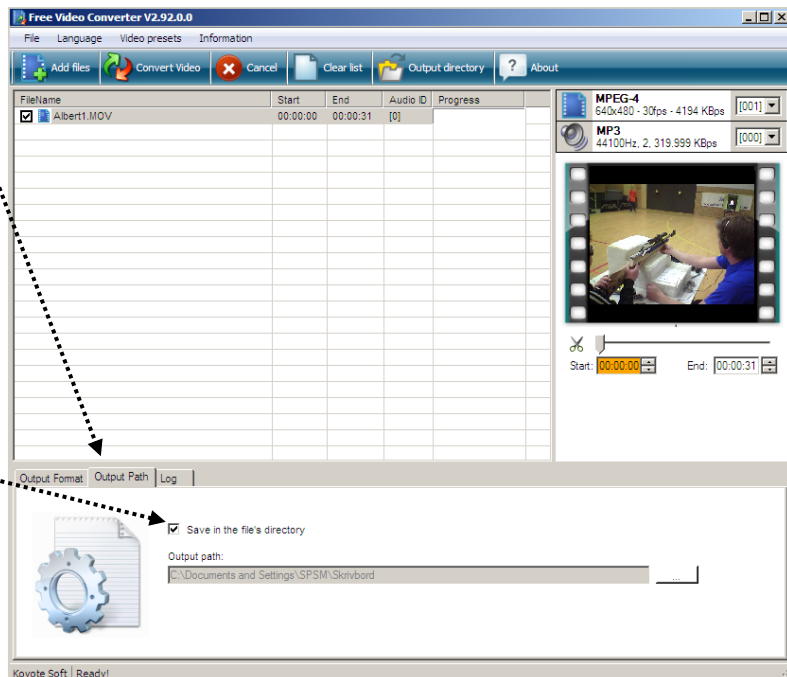

Output path

If you want the converted video in the same directory as the original video, make on **V** for -Save in the file's directory

Notice

It's only the first time you have to make this preferences

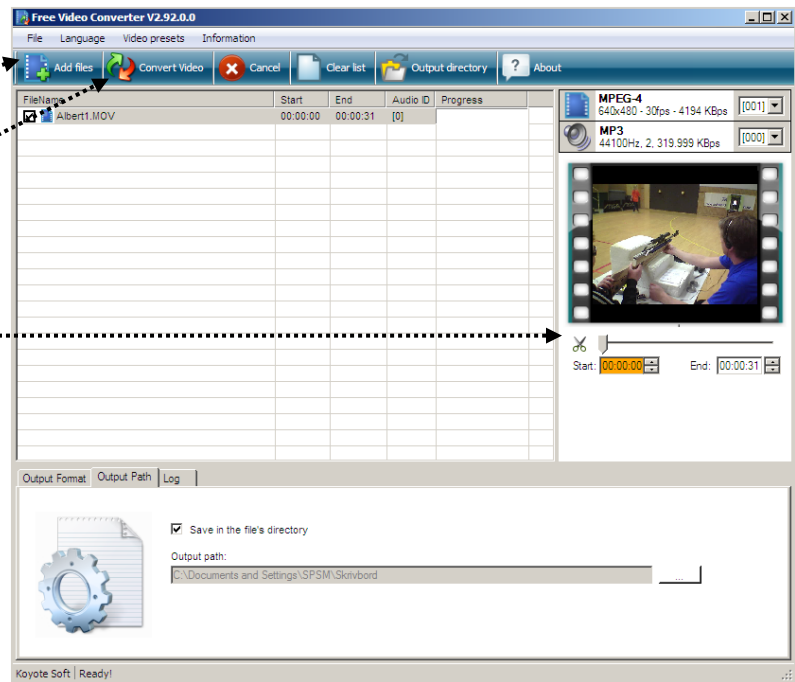

Convert

1. Add files

2. Convert video

It's possible to edit in the start and in the end
